Automatic Industrial Overhead Doors

Advanced entrance technology

DITEC automatic overhead doors

The ideal solution for all industrial needs

Best use of transit openings. Weather resistant. Maximum safety.

DITEC overhead doors offer a range of real and amazing advantages.

Their compact size leaves more available space both inside and outside the premises

DITEC sectional overhead door side runners move vertically along the wall and parallel to the ceiling, ensuring optimal use of the available internal space. Furthermore, their installation above the opening fully exploits the transit opening.

Easy and practical to open and operate

Their compact size ensures more available space both inside and outside the premises. They are also practical and easy to use, especially with original DITEC motors.

More environmental control

Their heat insulation and soundproofing, ensured by insulated panels, improves internal living conditions and energy consumption.

Light and aesthetically pleasing environments

The panels can also be manufactured with the addition of practical portholes or full aluminium sections featuring polycarbonate or unbreakable glass panels, wire meshing or air grilles.

They add value to the premises and meet all requirements

The design and different solutions offered ensure the door to be aesthetically pleasing and perfectly suited in any architectural environment - from modern and traditional industrial buildings to fine commercial buildings. The doors can meet any industrial and commercial requirement and add value to the building they are installed on. DITEC doors are built to ensure the highest ease and flexibility of use which, in turn, ensures a quick, hassle free and accurate replacement of old doors.

Reliability

DITEC has been awarded ISO 9001-VISION 2000 and IQ NET certifications. All products are affixed with a CE mark.

Technical features of the product range.

For transit openings up to 8 m wide

Minimum space required on the lintel - 200 mm

Distinctive features of models offered

DITEC overhead door panels are sturdy and ensure a high heat insulation and soundproofing.

The galvanised material used and the sandwich-type frame effectively protect it from the elements.

The core insulated with high-density (48 kg/m³), CFC-free polyurethane foam offers high protection from outside temperatures.

DITEC overhead door panels are 40 mm thick and are available in two heights - 500 mm and 610 mm.

The doors are available with streaked effect horizontal louvre motif, cassette and Flat (upon payment of a surcharge).

One of the smallest heat insulation coefficient!

Thermal transmittance according to standards
UNI EN 13241 appendix B, UNI EN 12428,
UNI EN ISO 10077-2, UNI EN ISO 10211-2
 $U_w = 1.18 \text{ W/m}^2\text{K}$

Wide range of colours and finishes offered

Standard
streaked grooved

White

similar to RAL 9010W

Silver

similar to RAL 9006W

Green

similar to RAL 6005W

Dark Brown

similar to RAL 8014W

similar to RAL 9010E

Optionals

Streaked cassette

Streaked cassette

in the colours of Teak and Nogal wood

Full Flat

in the colour of White RAL 9010

Grooved Flat

in the colours of Teak and Nogal wood

Colours printed on paper may not match the original colour; it is therefore advisable to refer to official RAL tables, also when selecting customised colours. Panels can also be used.

Lisbon
Doors for industrial vehicle transit.

Lisbon
Loading bays for logistic operations.

Gold Alu
Window sectioned doors with anodised or painted aluminium sections for commercial applications.

Lisbon

Safety. Large openings.

This is the universal door for your working environment. The door is ideal for opening and closing transit openings to take goods to your own vehicles or to your suppliers' vehicles. This door is suitable for any installation requirement and leaves all the space required inside the building. Lisbon is offered in the configuration for medium and large openings with galvanised insulated steel panels.

To select the correct installation solution and to check all standard and optional parts, see the technical data sheets and ask information on safety standards, which are a major issue in all DITEC projects.

Optimises goods transit.

Lisbon is also the perfect solution to close a goods loading bay.

It is equipped with a mechanically-operated sliding device specially designed to be installed in series, as required in logistics centres.

The shape of the vertical guides and the location of the torsion springs ensure an easy and rational installation and make the Lisbon model a very cost-effective solution.

Gold Alu

Light and pleasant environments. Maximum internal/external visibility. Modern and attractive frame.

Gold Alu is a DITEC sectional overhead door designed to be combined with thermally insulated panels and extruded aluminium panels, shaped for inserting methacrylate, glass, gridded or meshed windows.

This combination gives the door a very distinctive look, which enhances the face of both commercial and industrial buildings, where Gold Alu blends in perfectly as a practical and decorative feature.

Gold Alu makes the environment light and pleasant to work in as it allows natural light to go through the large clear area.

The aluminium profiles and the methacrylate or 3+3 chamber glass window sections are highly resistant to the elements and ensure a longer life of the door.

Acrylic panel with 3+9+3 mm chamber

See-through acrylic or satin-finish 3 mm panel
See-through or satin-finish 3+3 mm unbreakable glass

Aluminium air grille

Painted drawn wire meshing

Safety devices give peace of mind during operation

All DITEC doors are fitted with standard or optional safety devices

Torsion springs

The steel torsion springs (manufactured to DIN 17223 standards) have been designed to ensure a standard life from 10,000 to 100,000 operation cycles. With standard compliant spring safety.

Safety device against spring breakage

This special device immediately stops the door panel from closing in the event of balancing spring breakage.

Anti-pinching guard

Avoids the risk of fingers from being pinched if a hand is rested on the door moving panel.

Safety device against cable breakage

This special device immediately stops the door panel from moving in case of breakage of the return cables.

Infra-red photocells

The panel down movement is automatically stopped or reversed if the infrared beam is broken.

Moving photocells

Electronic DSS safety device complete with moving photocells, without contact on obstacle (as standard for automatic version).

Accessories meet all business requirements

Handles

Sturdy and ergonomic, they have been designed to ensure ease of manual door operation.

Window sections

Natural or lacquered aluminium window, with single or double methacrylate panels and glazing bars.

PVC air grilles

These avoid condensation and vent any fumes to the outside.

Perimeter Seals

The seals are made of special anti-ageing rubber and are located on the ends of the doors and on the side of the transit opening. They ensure total insulation thus avoiding the ingress of air, dust and water.

Portholes

Oval or rectangular in acrylic material, with polycarbonate panels with chamber, glazing bars and stretched ventilation net.

Pedestrian door

When the door is frequently used for pedestrian access, a side entrance can be fitted to the door or a pedestrian passage can be added in the door panel, without interfering with its look.

Sliding system vertical section drawings: types of installation

DITEC offers several technical solutions, suited to any type of frame.
Minimum lintel size - 200 mm.

Overall Size and Tracking Table

Industrial overhead doors									
	PL (mm)		PH (mm)		HA (mm)		SS (mm)	SD (mm)	Panel weight
	Min.	Max.	Min.	Max.	Min.	Max.	Min.	Min.	Max.

Key

NL - Normal lift
HL - Semi-vertical sliding action
VL - Vertical lift

RLB - Reduced lift with back springs
RLO - Reduced lift with front springs
IL - Contour lift
DI - Double contour lift

* Only possible upon confirmation by the Technical Department

Dod

Dod drive unit reliably automates all types of sectional overhead doors.

Heavy-duty motor, for total reliability

Reduced and compact sizes; can be easily installed when space is at a premium. Modern and smart design.

Can be used on different applications on sectional overhead doors:

- In line installation
- Pinion and chain installation.

Easy to install; keyed on the drive shaft or indirectly driven by pinion and chain, does not require other moving parts.

Adjustable rotary limit switch unit.

Two manual release systems:

- With cable: fast release system.
- With drive rod or chain.

After releasing the automation, the door can be manually operated.

Tried and tested, reliable components, already fitted on other DITEC automations.

Their indirect drive installation allows operating speed to be adjusted according to requirements or tackles applications when side space is not available.

Dod automations are complete with security, control and monitoring parts compliant with current standards.

Accessories

All accessories are genuine DITEC accessories and have been designed to add value to the door, to ensure long and reliable operation and peace of mind.

GOL 4 transmitters

Fixed code four channels, with cloning option, or with rolling code system.

Certified and directive compliant.

GOL 4W transmitters

Four-channel in metal containers for easy use even when wearing gloves.

Xel 2 infrared beam photocell

Allows the automation to operate at the highest safety levels.

Can be wall or column mounted. Modulated infrared beam.

Deb 08 key-operated handle

Key-operated handle with 8 m long cord for remote-operated release system.

Lamp

230 V and 24 V flashing light with flashing operation controlled from the control panel.

Dod accessories

- Compatible with DOD 14 and DOD 15 (also suitable for already existing automations as long as they are correctly configured - version 1.0)
- The full system includes the motor plus the DOD SBC chain-operated release with standard chain plus a 3800 mm long extension if required

H DOD	DOD LCG Chain extension
≤ 5000	NO
≤ 9000	YES

When building the system, only use DITEC accessories and safety devices.

DITEC automations all feature CE marking and are designed and built in compliance with the safety requirements of the Machinery Directive (2006/42/EC), of the Electromagnetic Compatibility Directive (2004/108/EC) and of the Low Voltage Directive (2006/95/EC) and of other Directives, laws, specific standards for special products and situations.

DITEC S.p.A. reserves the right to make changes which may improve the products. DITEC S.p.A. always strives to improve its products. For this reason, the technical details featured in this catalogue are not binding.

The pictures shown in this leaflet were taken with the consent of those concerned or in public locations.
